

Simple Periodic Table of Elements

A simple version of the colour-vision deficiency friendly Periodic Table of Elements including atomic numbers, element symbols and names, and period and group. Lanthanoids and Actinoids are shown. Coloured are the phases of individual elements at room temperature or, alternatively, different element flavours, element numbers, and year of discovery. See the original s-ink [periodic table of elements](#) for a more detailed version.

Data are based on the NIST Atomic Spectra Database and the Royal Society of Chemistry's periodic table, which compile experimentally verified and theoretically predicted ground-state configurations.

The typeface '[Elle](#)' and the Scientific colour map '[hawaii](#)' are used to represent individual groups of elements to all, including colour-blind, readers.
